

Seeker

found

Seeker tracks down valuables that have been reported as lost or stolen before they can be sold on.

Seeker from Found is a new product that can track down valuables that have been listed for re-sale on major reselling sites or in second-hand shops. Seeker scans major reselling sites (such as eBay and Gumtree) and second-hand retailers (like Cash Converters and Cex) for specific items.

A Seeker scan can be triggered by insurance companies and Found users.

Use Seeker to:

Enable customers to find stolen valuables rather than claiming

Identify fraudulent claims and repeat claimants

Automate loss adjustment process saving time and money

How does Seeker work?

Item reported stolen

Found user reports item as stolen using the Found app in just one tap. Or they make a claim for the stolen item on their policy.

Seeker triggered

Using the item photo and other information added by the user, the search begins. Seeker checks major reselling sites and second hand stores for matching items.

Machine learning

The similar items are reduced down to the most probable matches using our trained machine learning.

Matches sent

Links to the most probably matches are returned. They can then be reviewed so the item can be identified.

We're not just stopping there!

Seeker is part of an expanding ecosystem of products all designed to build the community that protects.

Found

Our lost and stolen property app that lets users manage and protect their personal valuables

Found for Business

Our app for businesses to log found property and get it back to its rightful owner
